IPCC AR5 Synthesis Report

ipcc
INTERGOVERNMENTAL PANEL ON climate change

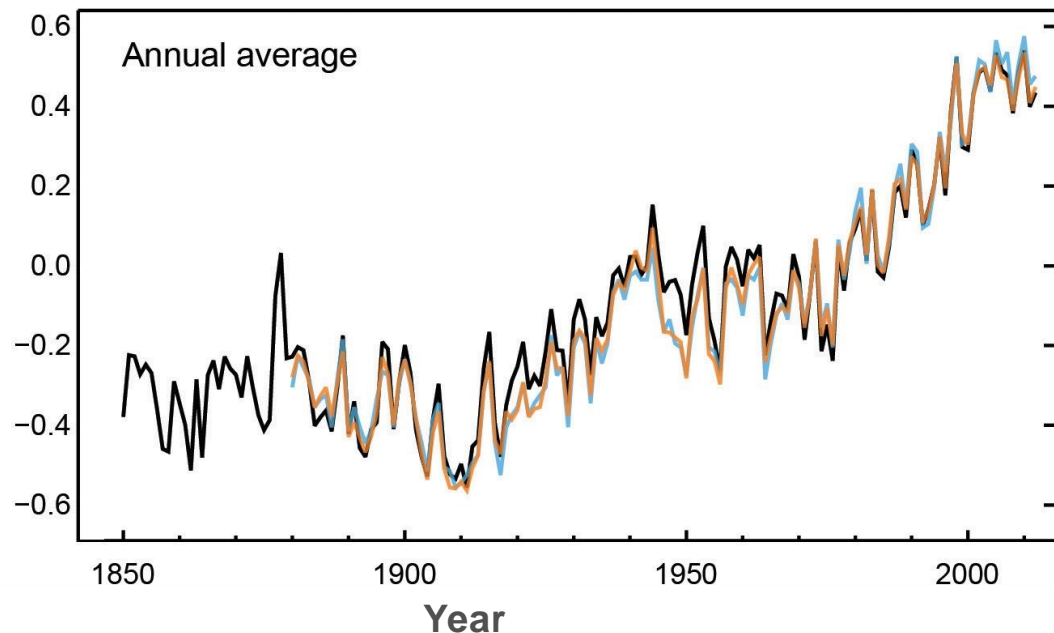

Key Messages

- **Human influence on the climate system is clear**
- **The more we disrupt our climate, the more we risk severe, pervasive and irreversible impacts**
- **We have the means to limit climate change and build a more prosperous, sustainable future**

AR5 WGI SPM, AR5 WGII SPM, AR5 WGIII SPM

Humans are changing the climate

It is extremely likely that we are the dominant cause of warming since the mid-20th century

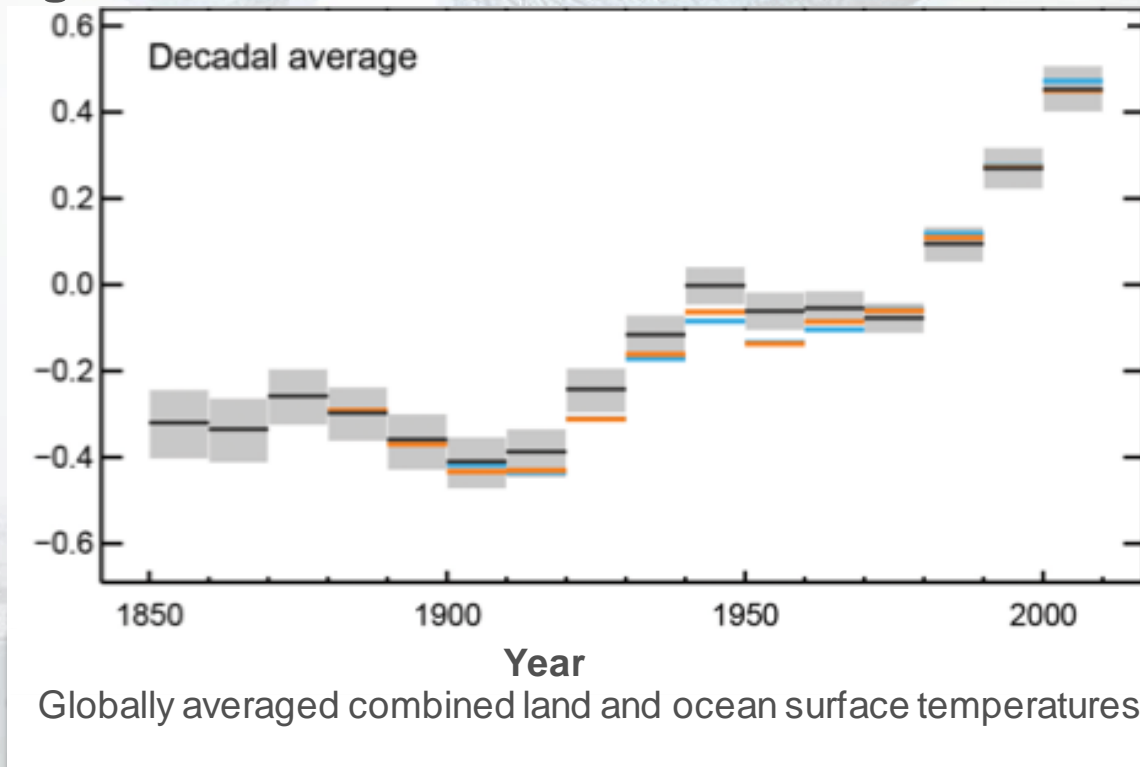

Globally averaged combined land and ocean surface temperatures

AR5 WGI SPM

Temperatures continue to rise

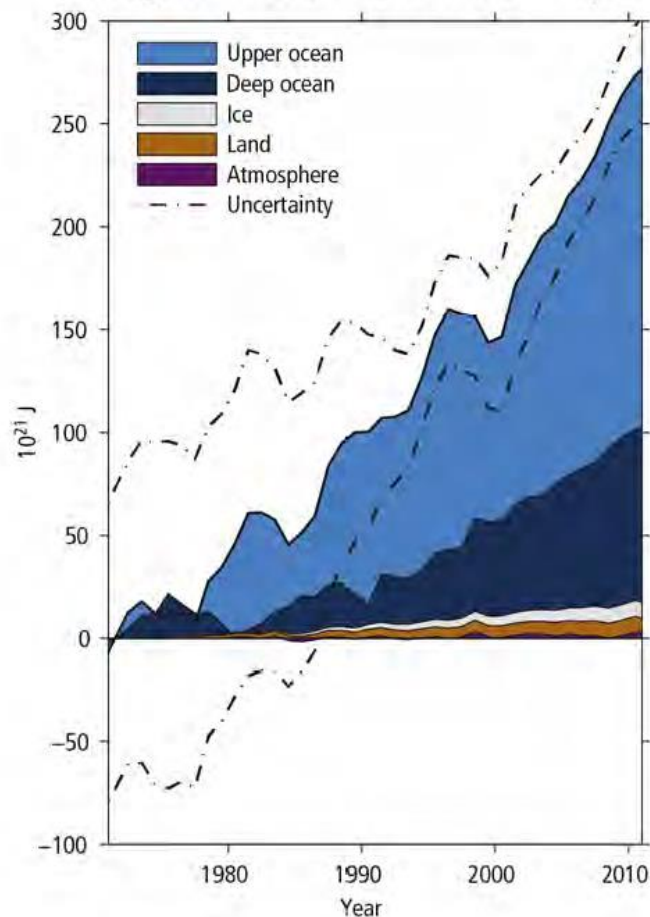

Each of the past 3 decades has been successively warmer than the preceding decades since 1850

AR5 WGI SPM

Oceans absorb most of the heat

Energy accumulation within the Earth's climate system

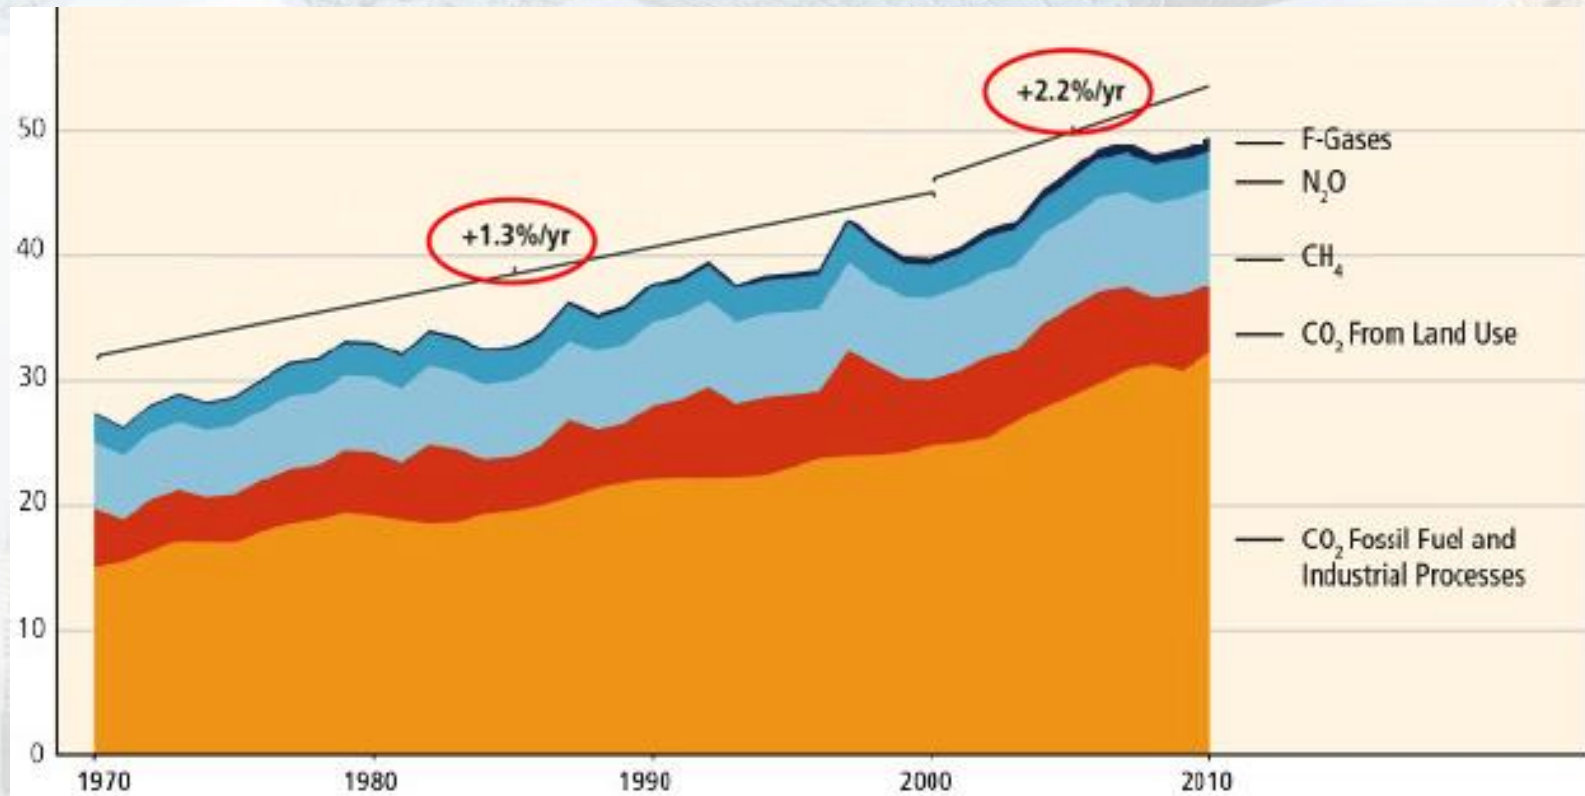

→ More than 90% of the energy accumulating in the climate system between 1971 and 2010 has accumulated in the ocean

→ Land temperatures remain at historic highs while ocean temperatures continue to climb

AR5 SYR

GHG emissions growth between 2000 and 2010 has been larger than in the previous three decades

GHG Emissions [GtCO₂ eq/yr]

AR5 WGIII SPM

Sources of emissions

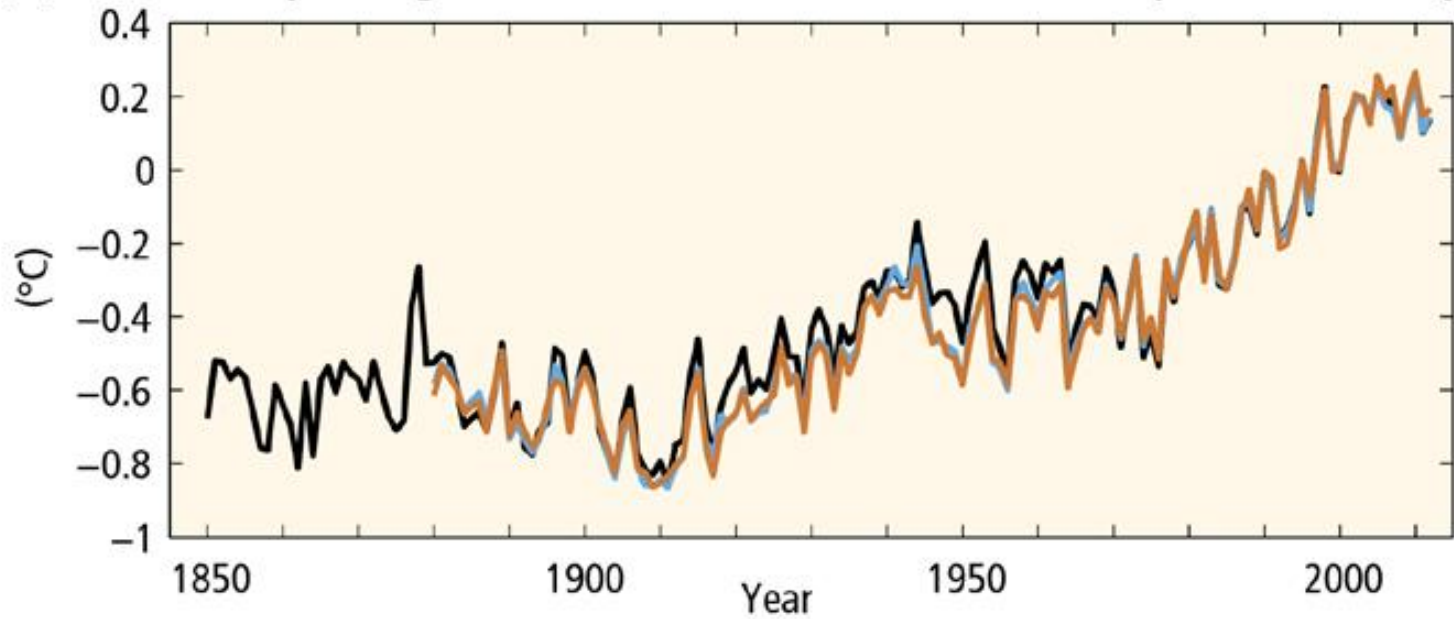

Energy production remains the primary driver of GHG emissions

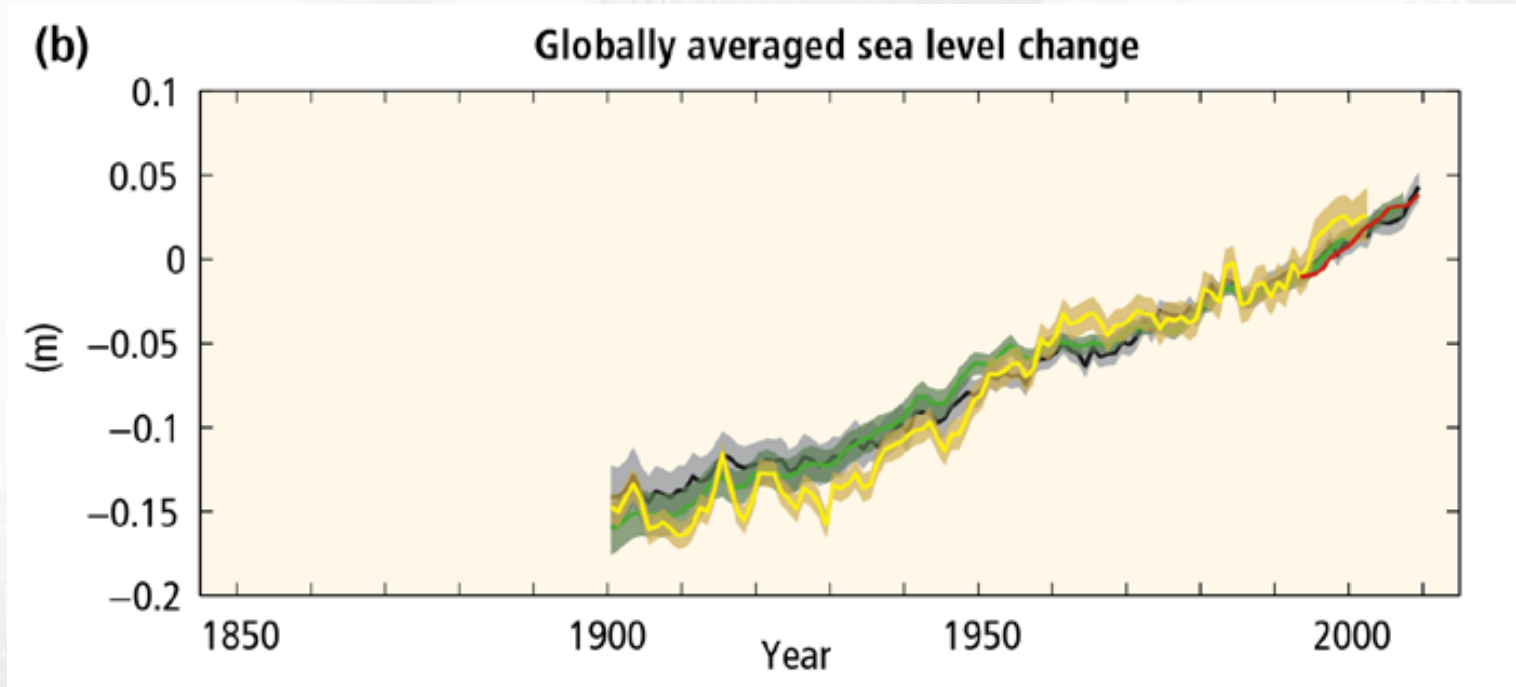

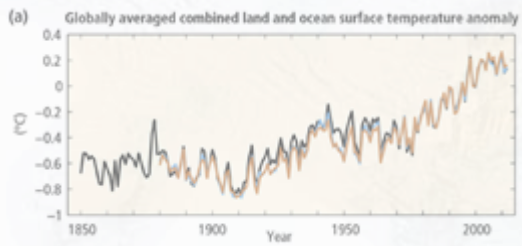

2010 GHG emissions

AR5 WGIII SPM

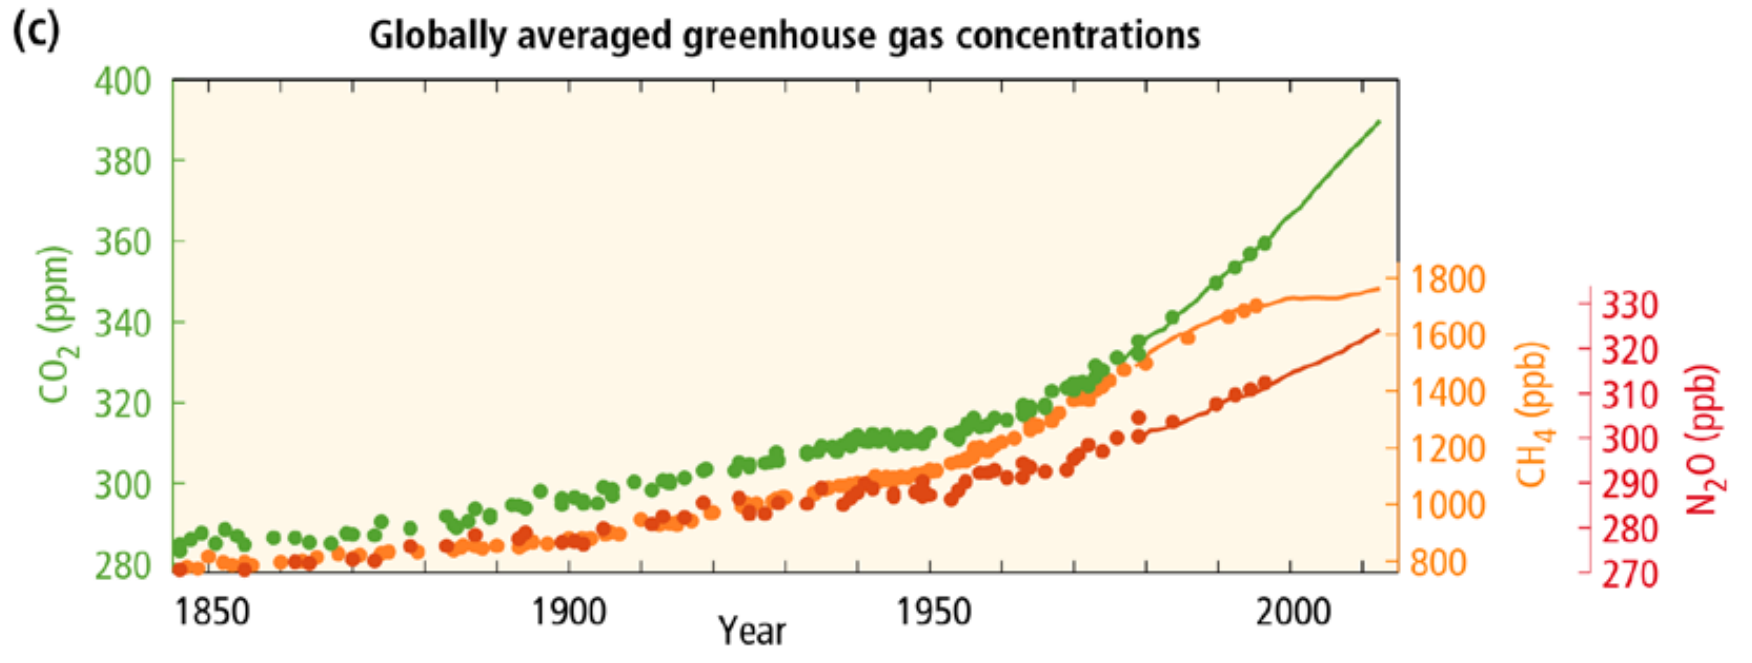

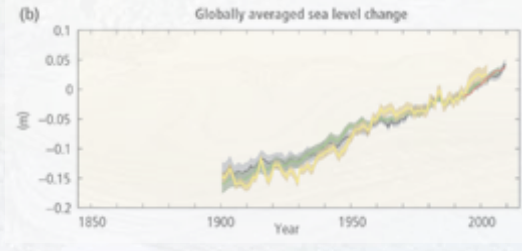

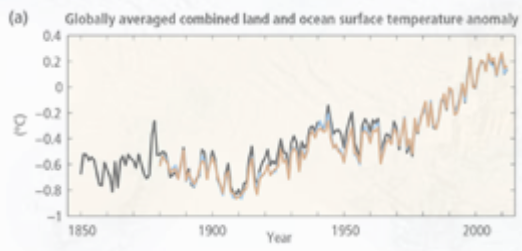

(a) Globally averaged combined land and ocean surface temperature anomaly

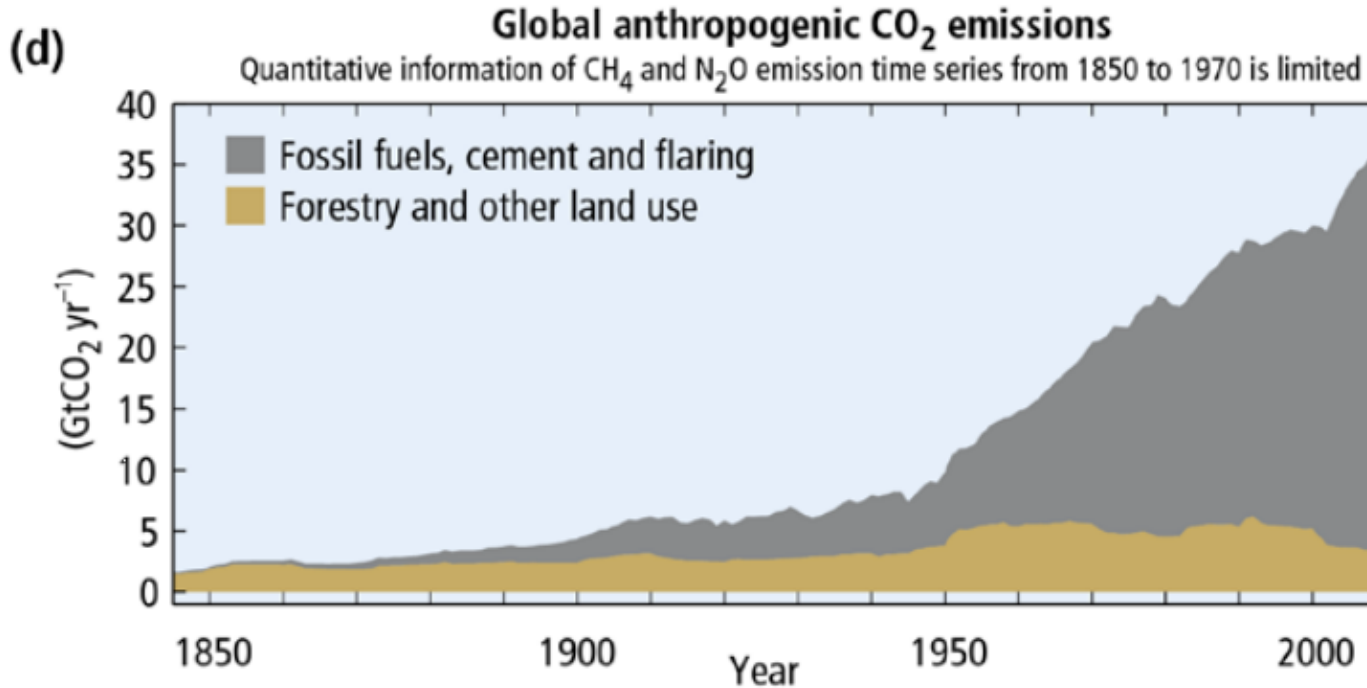

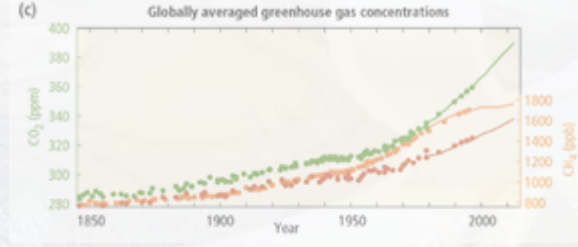

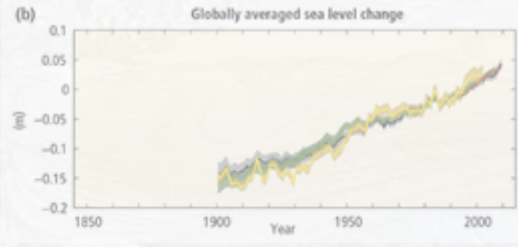

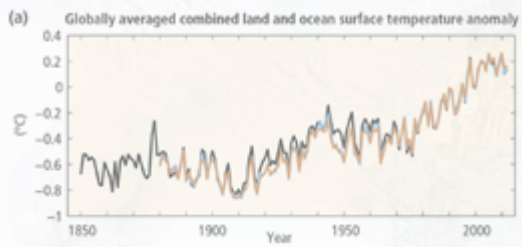

AR5 SYR SPM

AR5 SYR SPM

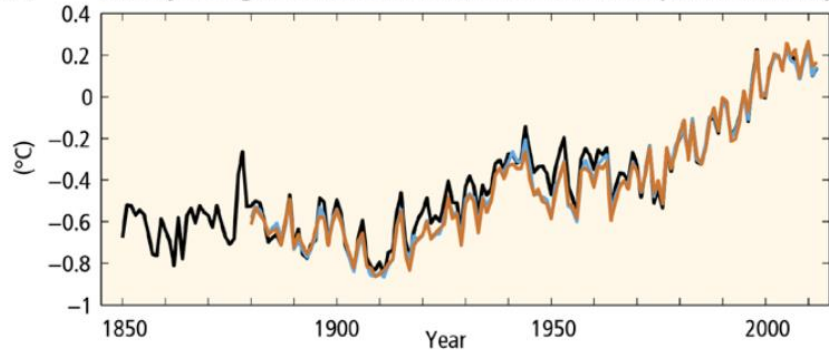

AR5 SYR SPM

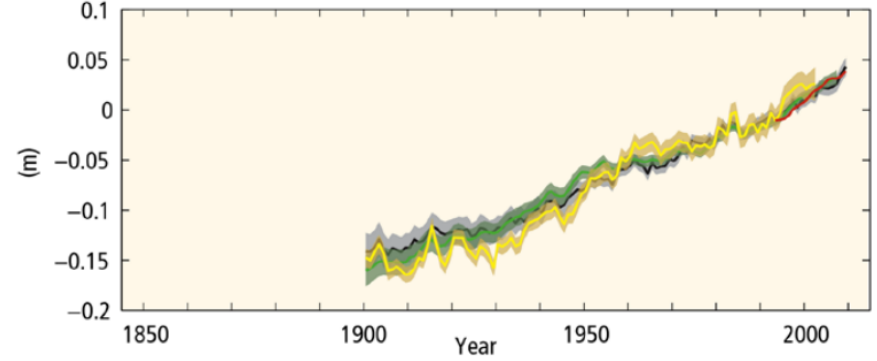

AR5 SYR SPM

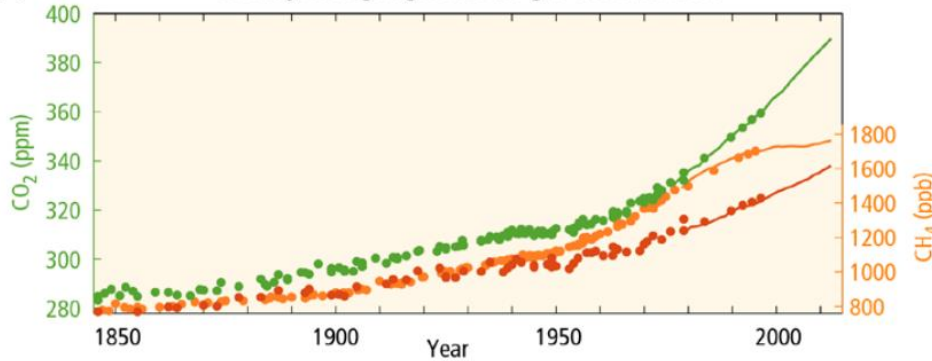

(a) Globally averaged combined land and ocean surface temperature anomaly

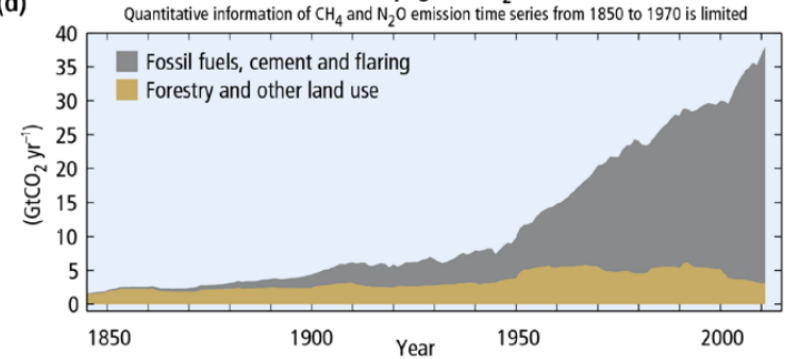

(b) Globally averaged sea level change

(c) Globally averaged greenhouse gas concentrations

(d) Global anthropogenic CO₂ emissions

AR5 SYR SPM

Some of the changes in extreme weather and climate events observed since about 1950 have been linked to human influence

AR5 WGI SPM

Impacts are already underway

- **Tropics to the poles**
- **On all continents and in the ocean**
- **Affecting rich and poor countries**

AR5 WGII SPM

Projected climate changes

Continued emissions of greenhouse gases will cause further warming and changes in the climate system

Oceans will continue to warm during the 21st century

Global mean sea level will continue to rise during the 21st century

It is very likely that the Arctic sea ice cover will continue to shrink and thin as global mean surface temperature rises

Global glacier volume will further decrease

AR5 WGI SPM

Potential Impacts of Climate Change

Food and water shortages

Increased displacement of people

Increased poverty

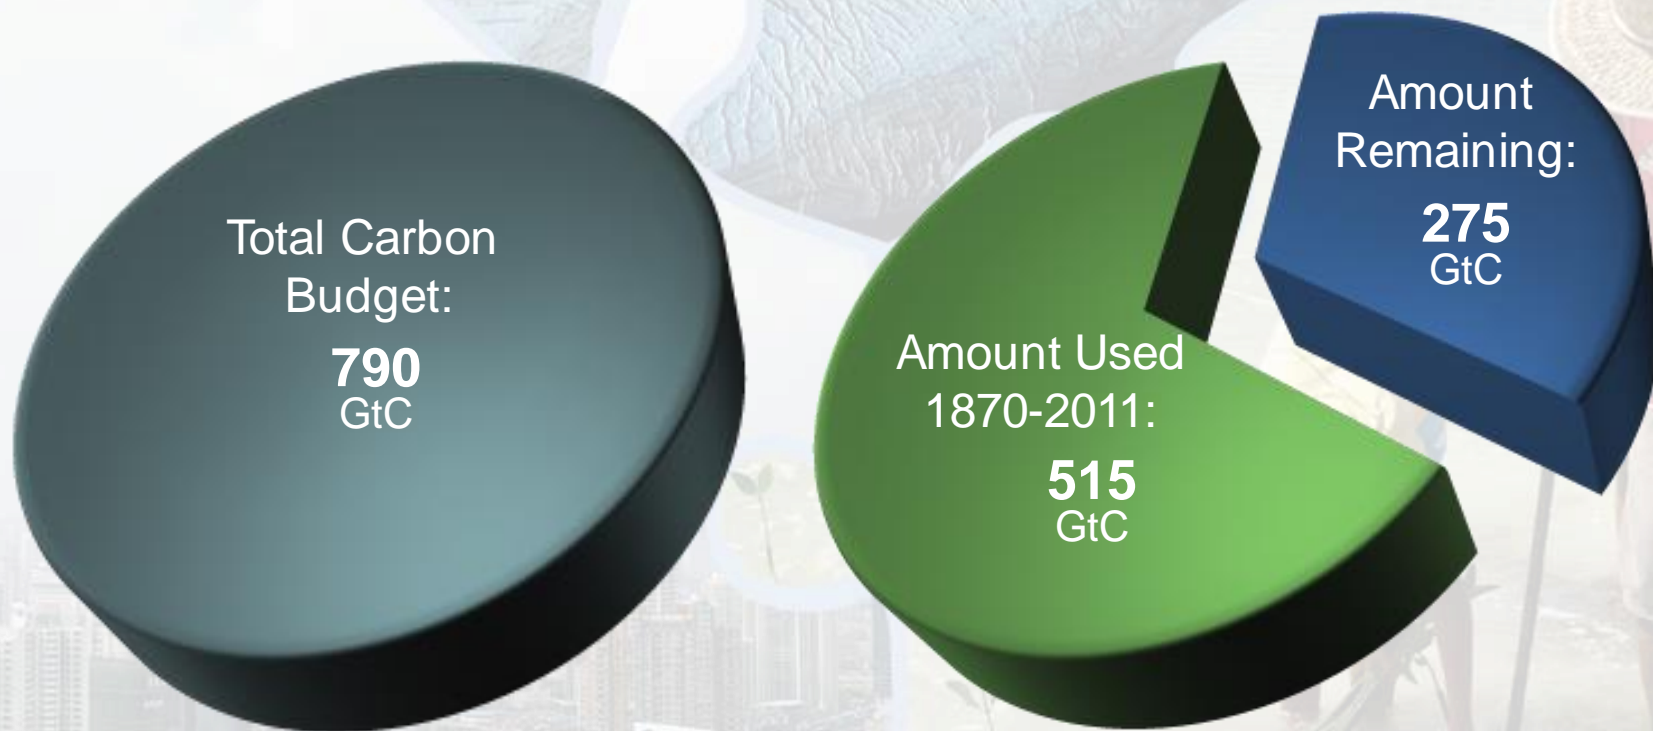

Coastal flooding

AR5 WGII SPM

The window for action is rapidly closing

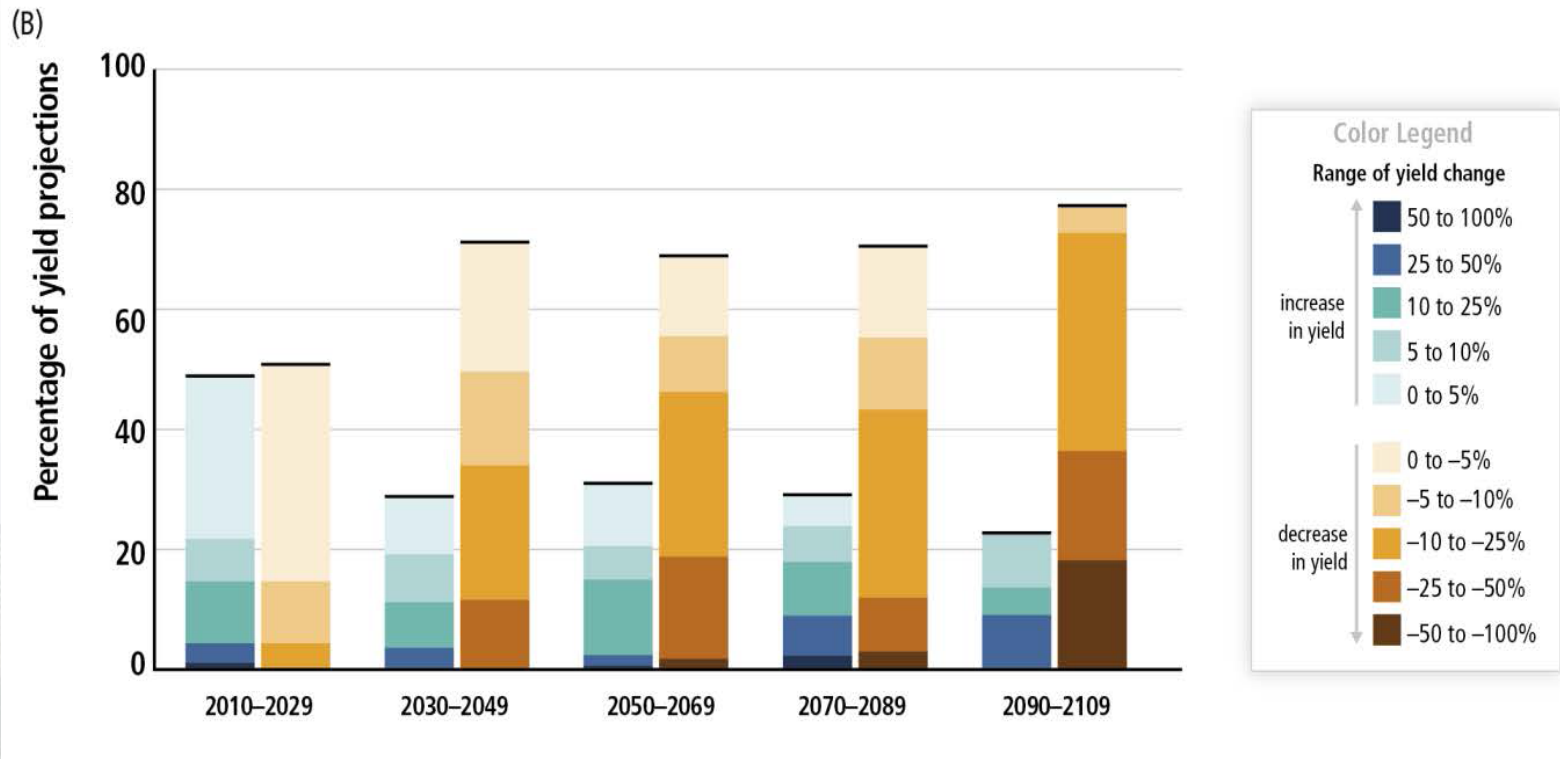

65% of our carbon budget compatible with a 2° C goal already used

AR5 WGI SPM

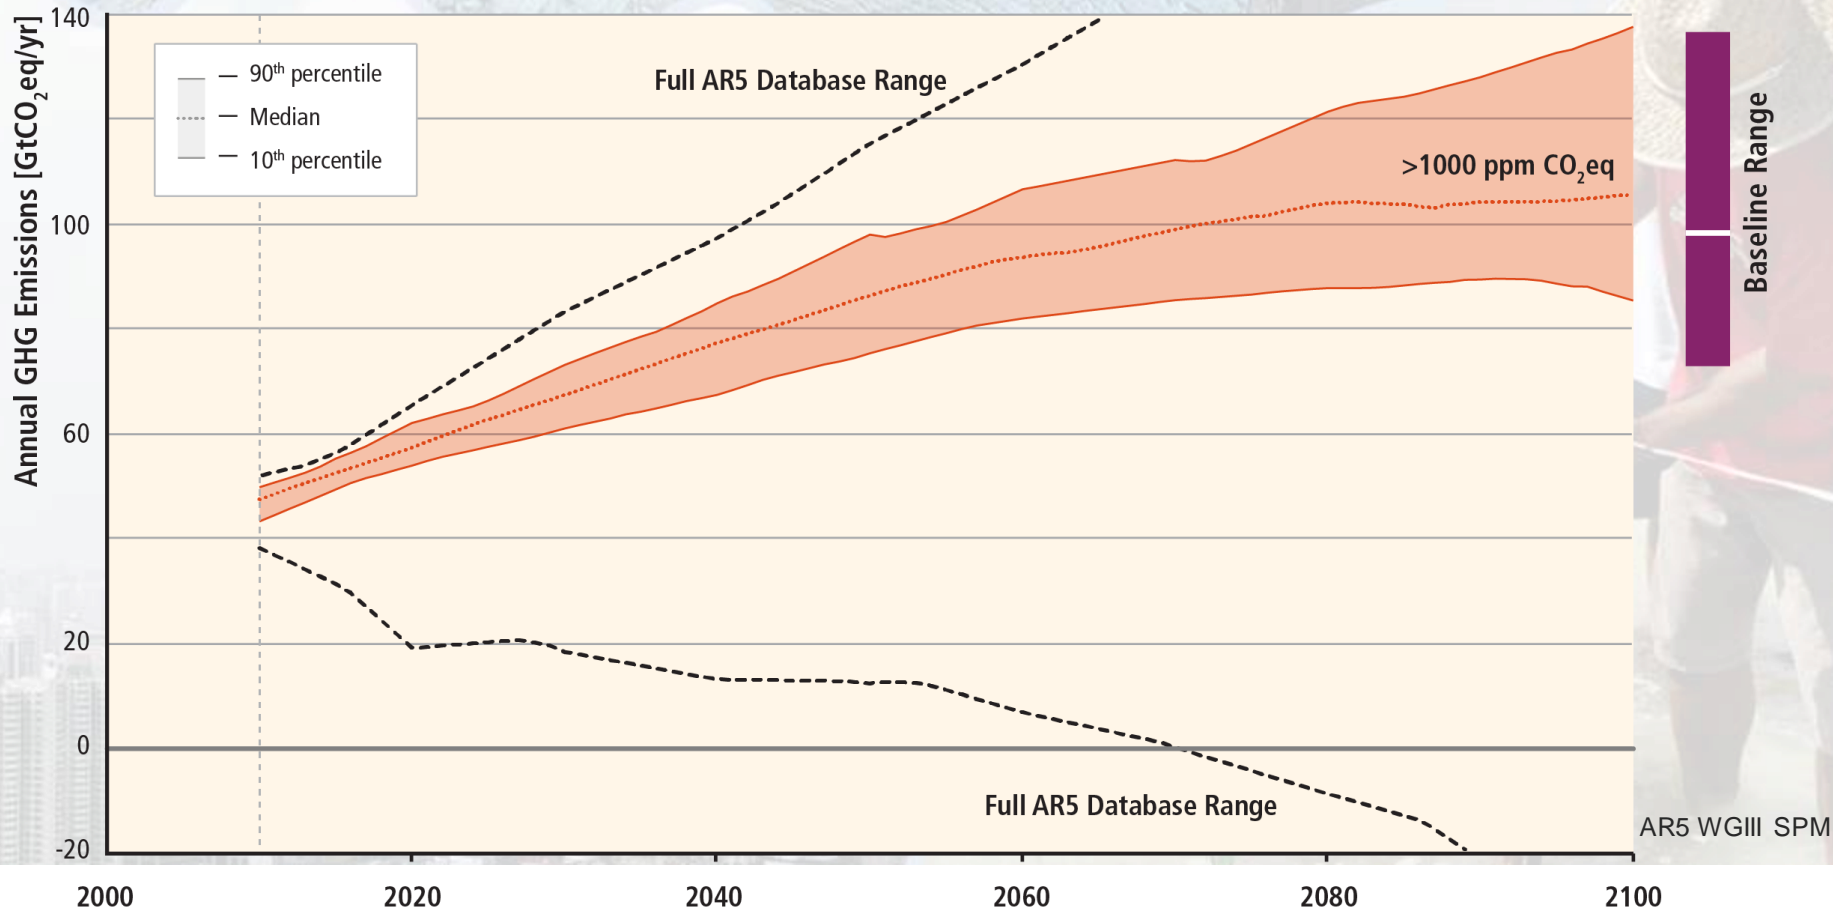

Climate Change Poses Risk for Food Production

Percentage of yield projections

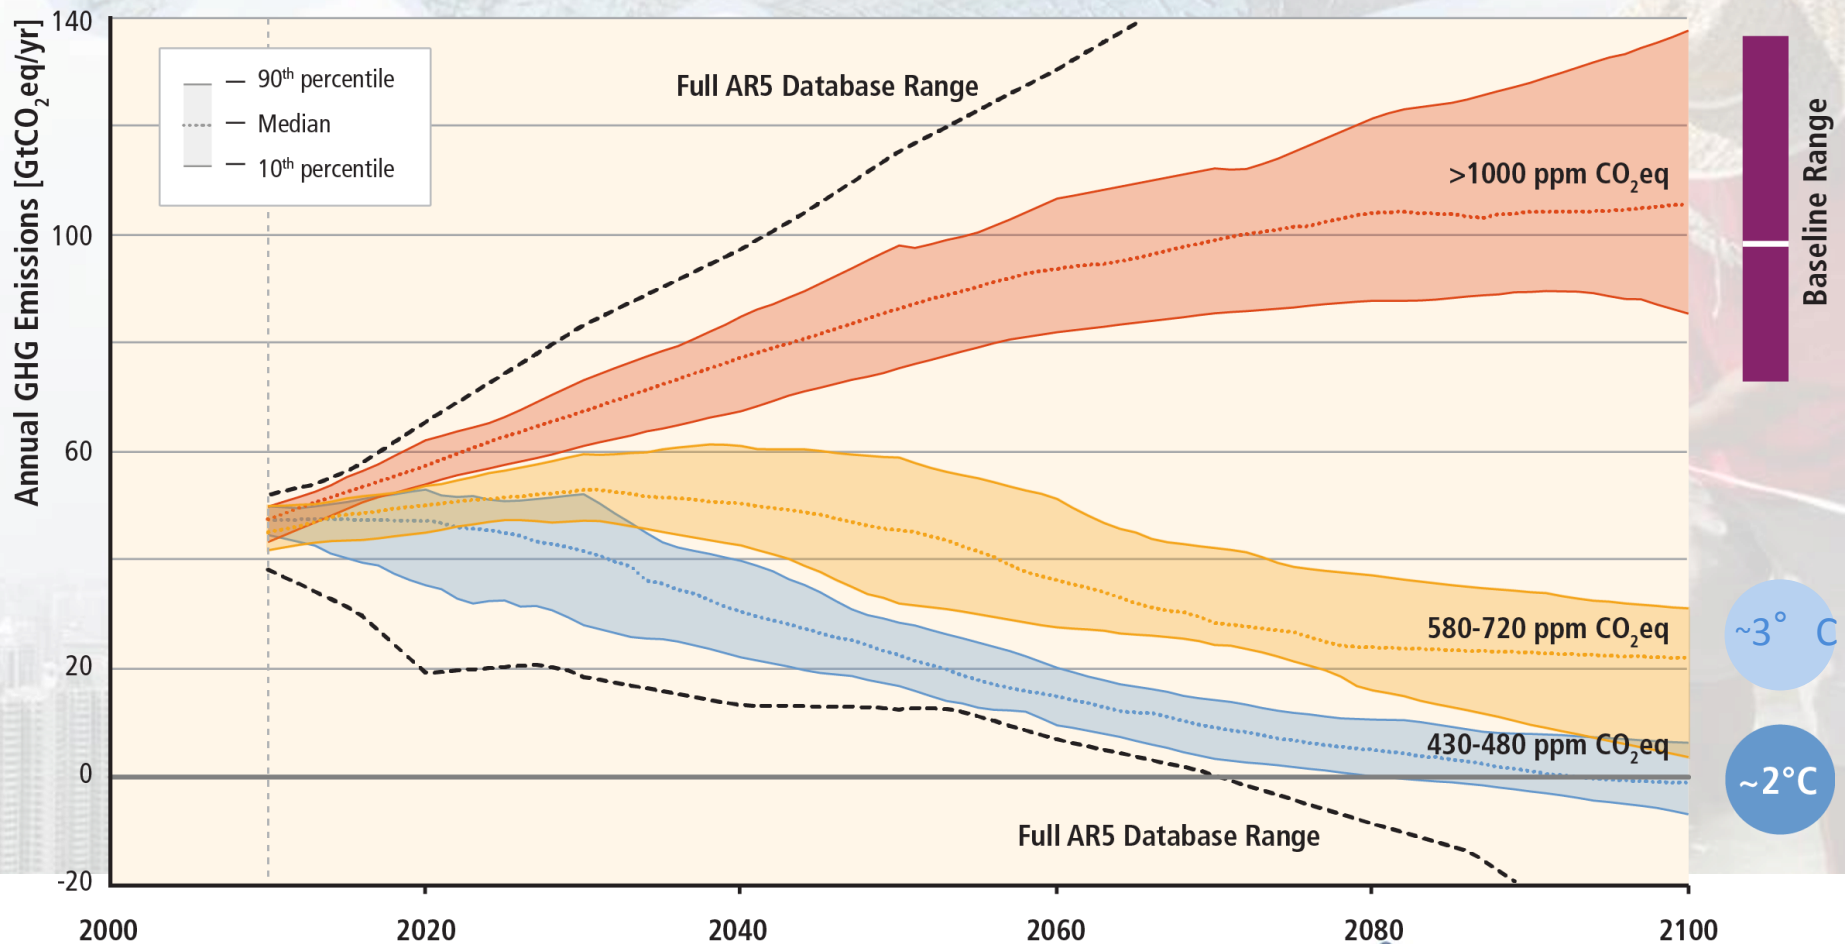

AR5 SYR SPM

Stabilization of atmospheric concentrations requires moving away from the baseline – regardless of the mitigation goal.

Based on Figure 6.7

Stabilization of atmospheric concentrations requires moving away from the baseline – regardless of the mitigation goal.

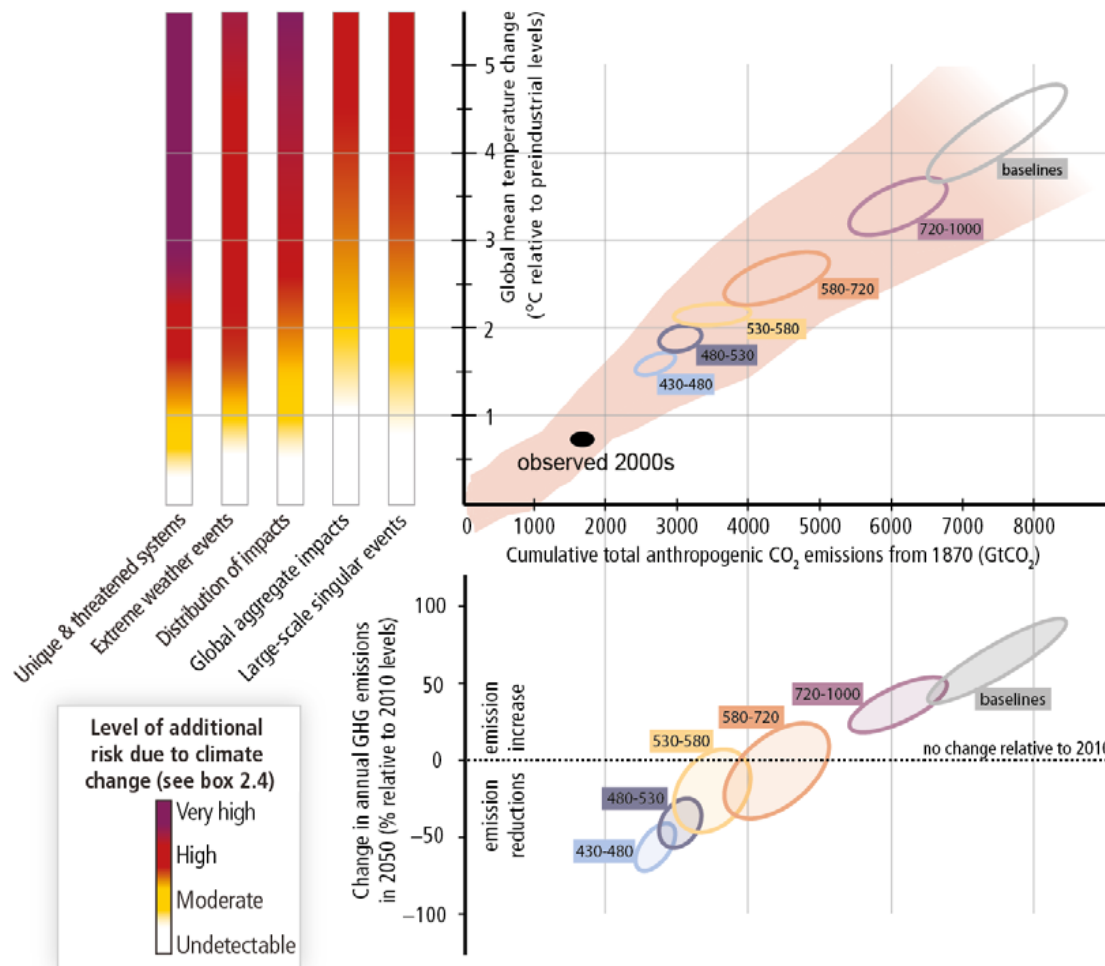

Based on Figure 6.7

Figure SPM.10,
A reader's guide

From climate
change risks to GHG
emissions

(A) Risks from climate change... (B) ...depend on cumulative CO₂ emissions...

(C) ...which in turn depend on annual
GHG emissions over the next decades

Limiting Temperature Increase to 2°C

Measures exist to achieve the substantial emissions reductions required to limit likely warming to 2° C

A combination of adaptation and substantial, sustained reductions in greenhouse gas emissions can limit climate change risks

Implementing reductions in greenhouse gas emissions poses substantial technological, economic, social, and institutional challenges

But delaying mitigation will substantially increase the challenges associated with limiting warming to 2° C

AR5 WGI SPM, AR5 WGII SPM, AR5 WGIII SPM

Mitigation Measures

More efficient use of energy

Greater use of low-carbon and no-carbon energy

- Many of these technologies exist today

Improved carbon sinks

- Reduced deforestation and improved forest management and planting of new forests
- Bio-energy with carbon capture and storage

Lifestyle and behavioural changes

AR5 WGIII SPM

Ambitious Mitigation Is Affordable

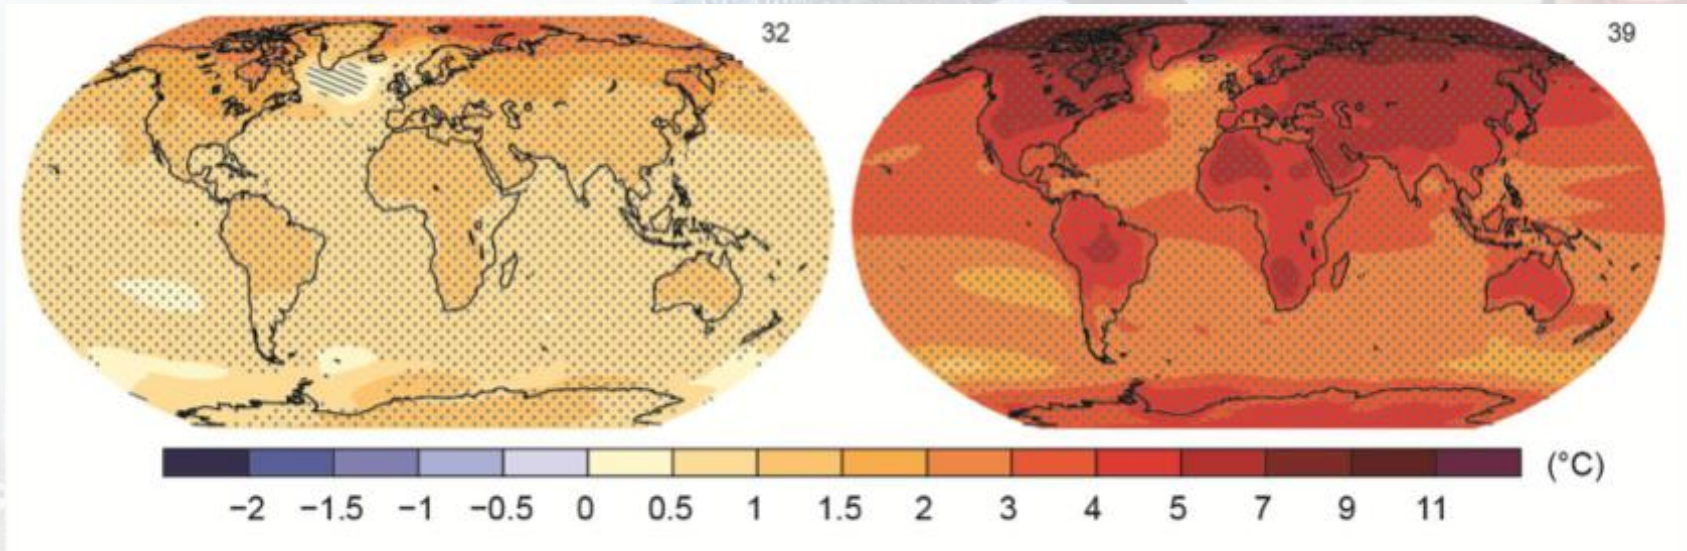

- Economic growth reduced by ~ 0.06%
(BAU growth 1.6 - 3%)
- This translates into delayed and not forgone growth
- Estimated cost does not account for the benefits of reduced climate change
- Unmitigated climate change would create increasing risks to economic growth

AR5 WGI SPM, AR5 WGII SPM

The Choices We Make Will Create Different Outcomes

With substantial mitigation

Without additional mitigation

Change in average surface temperature (1986–2005 to 2081–2100)
